To Whom It May Concern

The Trinidad Generation Unlimited (TG) has been using NP Turbine Oil R&O 32, manufactured by the Trinidad & Tobago National Petroleum Marketing Company Limited (NP), in our 720 MW combine cycle power plant. TCU facility consists of six GE frame 7 EA gas turbines and two General Electric SC5 steam turbines. NP was awarded the “first fill” contract and has been in use for approximately three (3) years.

Oil tests are carried out as per general electric guidelines, results thus far have been satisfactory and have indicated that the oil is fit for further use.

Sincerely,

Carl Sookraj
Operations Team Leader
